

CLAIMS

1. A method for the production of individual administration forms arranged as a stack from individual tapes, comprising:
 - a) arranging said individual tapes to a multilayered strand,
 - b) aligning and transporting the multilayered strand to a cross-cutting scissor, and
 - c) transferring the stack directly into a pre-opened dispenser.
2. A method according to claim 1, wherein said tapes have a width of between 5 and 40 mm.
3. A method according to claim 1, wherein said administration forms are sheet-like.
4. A method according to claim 1, wherein said administration forms contain therapeutic or cosmetic or food-technological products.
5. A method according to claim 1, wherein said administration forms have a weight per unit area between 10 and 50g/m².
6. A method according to claim 1, wherein said dispenser is made of a plastic or cardboard.
7. A method according to claim 1, wherein said dispenser is a sealing bag.
8. A method according to claim 1, wherein said dispenser is a two-piece dispenser with a bottom part in the shape of a drawer and a top-part.
